

Trend Micro™

SECURING AWS WORKLOADS

Comprehensive security for everything you put in the cloud

ELASTIC CLOUD ENVIRONMENTS CALL FOR ELASTIC SECURITY SOLUTIONS

Organizations around the world are embracing the economic and operational benefits of cloud computing. However, in the public cloud, security needs to be approached differently—as a shared responsibility. AWS provides a secure cloud infrastructure and as the cloud user, you need to provide security for what you put IN the cloud, like your applications, content, and operating systems.

To help you with your shared responsibility, Trend Micro provides the most comprehensive set of recommended security capabilities available for AWS. With Trend Micro's tight integration with AWS, cost and complexity go down, making it faster and easier for you to meet security requirements while realizing the operational benefits of the cloud.

AWS CLOUD AND MULTI-CLOUD PROTECTION

DESIGNED FOR AWS WORKLOADS - AUTOMATED, SCALABLE SECURITY FROM THE LEADER IN SERVER SECURITY

Detect and protect against intrusions

Hackers can easily exploit vulnerabilities like Shellshock and Heartbleed to gain access to sensitive information. Immediately protect your instances from these and new serious vulnerabilities with intrusion detection and prevention (IDS/IPS).

Uncover suspicious changes

Get alerts when unplanned or malicious changes are made to your systems. Suspicious events are immediately highlighted in the centralized console so you can evaluate and determine right away if there is a real threat—without sorting through thousands of logs.

Speed up PCI DSS compliance

Accelerate compliance by meeting multiple PCI requirements with a single product, including intrusion detection and prevention, file integrity monitoring, and log inspection.

Keep malware off workloads

Protect your Windows and Linux workloads from increasingly complex malware. Powered by the Trend Micro™ **Smart Protection Network™** and consistently rated the best performing antivirus solution by AV-TEST*, we help you instantly identify and remove malware and blacklist domains known to be command and control servers.

Stop application attacks

SQL injection attacks are used in 80 percent of web application data breaches. Instantly protect your web servers with IPS rules that block XSS or SQL attacks and other serious vulnerabilities until you can patch systems.

Why Trend Micro and AWS?

Trend Micro, a global leader in cloud security, delivers flexible, proven solutions for AWS which:

- Have been architected to provide flexible, scalable protection for Amazon EC2 workloads
- Automatically detect new instances and rapidly protect them, ensuring constant protection even when scaling
- Fully scriptable and integrated with cloud management tools such as AWS CloudFormation, RightScale, Chef, and Puppet
- Provide multiple security capabilities in a single product to improve security visibility

“Deep Security is at the forefront when it comes to providing the majority of controls we need for compliance and risk mitigation in the cloud.”

William Crank
Chief Information Security Officer
MEDHOST

*The AV-TEST Institute is a leading international and independent service provider in the fields of IT security and antivirus research.

AUTOMATED, SCALABLE SECURITY THAT GETS OUT OF YOUR WAY

Trend Micro™ Deep Security™ secures more servers globally than anyone else and specializes in protection for cloud and virtualized workloads. It provides comprehensive, flexible security for AWS workloads in a single product, so you can build new applications or move existing resources to the cloud with confidence.

Deep Security protects workloads by:

- Defending against network threats with intrusion detection and prevention (IDS/IPS)
- Immediately protecting against vulnerabilities like Shellshock and Heartbleed
- Keeping malware off Windows and Linux workloads
- Alerting when unplanned or suspicious changes are made to systems
- Stopping SQL injection and XSS attacks on applications

Also available for purchase on the [AWS Marketplace](#).

OPTIMIZED FOR AWS

Trend Micro's security solutions are optimized for AWS, including support of the most common platforms like Linux, Windows, RedHat, Suse and Ubuntu. Fully scriptable, Deep Security controls can also be automated using cloud management tools like Puppet, Chef, AWS CloudFormation, Saltstack and more.

Trend Micro is the **#1 provider of server security for physical, virtual, and cloud environments**¹— combining the most complete set of security capabilities with automated management to dramatically reduce both risk and cost.

ABOUT TREND MICRO

As a global leader in cloud security, Trend Micro develops security solutions that make the world safe for businesses and consumers to exchange digital information. With more than 27 years of experience, we deliver top-ranked security that fits our customers' needs, stops new threats faster, and protects data in physical, virtualized, and cloud environments.

“Deep Security allows us to auto-scale with AWS instances automatically, scaling up or down without the need to provision security agents manually.”

Paul Hidalgo
Platform Manager
[MatchMove](#)

“Deep Security covers PCI DSS requirements not provided by AWS, like Intrusion Detection (IDS) and firewall. This allowed us to acquire PCI DSS verification in only three months versus the year we had expected.”

Naoko Samata
Founder and President
